

Remaining Fixes — Round 2 (for Codex)

Live WordPress · after the demo-content purge · 2026-07-24

Good progress: the theme-demo purge reached the live site — the insurance copy, “Yellow Construction”, the +880 phone, info@gmail.com and the Fall River address are gone, and the homepage now describes the real business. Three items remain before Merchant Center. Same rules as before: edit the LIVE site at <https://trenchesafety.org>, verify each change from the public URL (not an API “200 OK”), and **never invent facts**.

STEP 0 · REVIEW BEFORE YOU PROCEED (do not skip)

Before changing anything, review the current live state and confirm your edits will actually reach production. Do NOT start editing until all four are true:

- Review what’s already done vs. not. Run the Definition-of-Done checks at the bottom first, so you know the real starting point (some products are already priced; the demo purge is done). Only work the items that still fail — don’t redo finished work.
- Prove you can write to the LIVE site. Set a temporary marker, purge cache, fetch the public URL, confirm it shows, then revert — this is why past edits didn’t stick:

```
wp option update blogdescription 'LIVEWRITE-OK-42' && wp cache flush
curl -s https://trenchesafety.org/ | grep -o 'LIVEWRITE-OK-42' # must print it; if not, STOP
wp option update blogdescription '<real tagline>'
```

- Confirm you have the 2 owner facts below (prices + real address). If missing, STOP and ask.
- Back up first. After each fix, re-verify from the public URL before moving on; report the before/after for every change.

FACTS NEEDED FROM THE OWNER (only 2 — do not invent)

- A real price for every product (the propane tanks are all still unpriced).
- A real street address to replace the Google Plus Code “VVV4+3G7, Watertown, SD 57201”.

FIX 1 · Price every product (the hard blocker)

9 of 10 sampled products have no price. Set a real price + publish, via WooCommerce REST:

```
GET /wp-json/wc/v3/products?per_page=100&page=N # enumerate all products
PUT /wp-json/wc/v3/products/<id> { "regular_price": "<REAL_PRICE>", "status": "publish" }
# VERIFY (must show a price on each):
curl -s https://trenchesafety.org/product/<slug>/ | grep -o '$[0-9,]\+'
```

Do not finish until the count of products with an empty price = 0.

FIX 2 · Remove the leftover fake phone (needs no new fact)

A fake number “(684) 555-0102” still shows on ~7 pages (footer/contact) next to the real +1 605-356-2237. Unify to the real number:

```

wp search-replace '(684) 555-0102' '+1 605-356-2237' --all-tables
wp search-replace '555-0102' '605-356-2237' --all-tables
# also check the Contact page / Contact-Form-7 / footer widget if any remains
wp cache flush
# VERIFY (all must be 0):
for u in / /about /contact /shop /terms-and-condition; do curl -s "https://trenchsafety.org$u" | grep
-c '555-0102'; done

```

FIX 3 · Replace the Plus-Code address with a real street address

“VVV4+3G7, Watertown, SD 57201” is a Plus Code, not a verifiable address. Replace site-wide and in WooCommerce store settings:

```

wp search-replace 'VVV4+3G7, Watertown, SD 57201, USA' '<REAL_STREET_ADDRESS>' --all-tables
wp search-replace 'VVV4+3G7' '<REAL_STREET_ADDRESS>' --all-tables
# WooCommerce → Settings → General → Store Address = same real address
wp cache flush
# VERIFY (must be 0):
curl -s https://trenchsafety.org/ | grep -c 'VVV4+3G7'

```

DEFINITION OF DONE — run against the public URL

```

# 1) placeholder sweep – expect NO output:
for u in / /about /contact /shop /refund_returns /shipping-policy /terms-and-condition /privacy-policy-2; do
  curl -s "https://trenchsafety.org$u" | grep -Eio "555-0102|vvv4\+3g7|info@gmail\.com|insurance need s|\+880" \
    | sort -u | sed "s|^|$u: |" ; done
# 2) every product shows a price
# 3) one phone (+1 605-356-2237) and one real address everywhere

```

Report back the actual output of sweep (1) and the unpriced-product count. “Done” = sweep prints nothing AND zero unpriced products, both checked on <https://trenchsafety.org> — not on API responses.
