

Fix List for Codex — Live & Verified

WordPress + WooCommerce + Elementor · <https://bwcontainers.com> · 2026-07-26

This store is the closest to ready. Identity is coherent (brand = domain = products), products are priced, the policy pages exist, and there is no theme-demo junk. Only 4 fixes remain. Same rules as always: edit the LIVE WordPress at <https://bwcontainers.com>, verify each change from the public URL (not an API “200 OK”), and **never invent business facts**.

STEP 0 · REVIEW BEFORE YOU PROCEED (do not skip)

- Review the current live state first. Run the Definition-of-Done checks at the bottom before editing, so you know what actually still fails. Don't redo finished work.
- Prove you can write to the LIVE site — past attempts on a sibling site edited local files or staging and never reached production. Marker round-trip:

```
wp option update blogdescription 'LIVEWRITE-OK-77' && wp cache flush
curl -s https://bwcontainers.com/ | grep -o 'LIVEWRITE-OK-77' # must print it; if not, STOP
wp option update blogdescription '<real tagline>'
```

- Confirm you have the 2 owner facts below. If missing, STOP and ask — do not guess.
- Back up first (DB + files). Re-verify from the public URL after every fix and report before/after.

FACTS NEEDED FROM THE OWNER (only 2 — do not invent)

- A real street address (street + number, suburb, state, postcode) to replace the Google Plus Code “5RVJ+3J2 Sunshine West, Victoria”. Use the registered business address if there's no public premises.
- The ABN (Australian Business Number) to display in the footer / Contact / Terms.

FIX 1 · Replace the Plus-Code address with a real address

A Plus Code is not a verifiable business address. Replace it everywhere it appears, and set the WooCommerce store address to match:

```
wp search-replace '5RVJ+3J2 Sunshine West, Victoria, Australia' '<REAL_ADDRESS>' --all-tables
wp search-replace 'RVJ+3J2' '<REAL_ADDRESS>' --all-tables
# WooCommerce → Settings → General → Store Address = same real address
wp cache flush
# VERIFY (expect 0):
curl -s https://bwcontainers.com/contact/ | grep -c 'RVJ+3J2'
```

FIX 2 · Remove the personal Gmail from the front end (no new fact needed)

hillkandil@gmail.com appears on the homepage, and the author archive /author/hillkandilgmail-com/ is publicly reachable (HTTP 200). The business already has info@bwcontainers.com — use only that:

```
wp user list --fields=ID,user_login,user_email,display_name
wp user update <ID> --display_name='BWContainers' # also change the author nicename/slug
wp search-replace 'hillkandil@gmail.com' 'info@bwcontainers.com' --all-tables
wp cache flush
# VERIFY (expect 0, and the author archive should 404 or redirect):
curl -s https://bwcontainers.com/ | grep -c 'hillkandil@gmail.com'
curl -s -o /dev/null -w '%{http_code}\n' https://bwcontainers.com/author/hillkandilgmail-com/
```

FIX 3 · Set a real site title + meta descriptions (no new fact needed)

Every page title is the placeholder “bwcontainers.com” and there is no meta description:

```
wp option update blogname 'BWContainers'
wp option update blogdescription 'Shipping Containers Australia-Wide'
# set page titles + meta descriptions in the SEO plugin, then regenerate the sitemap
wp cache flush
# VERIFY (title must no longer be just the bare domain):
curl -s https://bwcontainers.com/ | grep -o '<title>[^<]*</title>'
```

FIX 4 · Add the ABN + confirm GST-inclusive pricing

- Display the ABN in the footer, Contact page and Terms (standard for AU e-commerce).
- Confirm displayed prices include GST (Australian Consumer Law single-total-price rule) and that delivery costs are clear; the Merchant Center feed must match the page exactly.
- Check the two products that render no price (10ft x 8ft one-trip blue; 8ft one-trip green) — if they are variable products, make sure a price or price range displays.
- Verify the homepage “24/7 Support” badge is literally true; if not, state the real support hours.

```
# VERIFY:
curl -s https://bwcontainers.com/ | grep -ci abn # >0
curl -s https://bwcontainers.com/product/<slug>/ | grep -o '$[0-9,]\+' # price shows on every product
```

DEFINITION OF DONE — run against the public URL

```
curl -s https://bwcontainers.com/contact/ | grep -c "RVJ+3J2" # 0
curl -s https://bwcontainers.com/ | grep -c "hillkandil@gmail.com" # 0
curl -s -o /dev/null -w "%{http_code}\n" \
  https://bwcontainers.com/author/hillkandilgmail-com/ # 404/301
curl -s https://bwcontainers.com/ | grep -o "<title>[^<]*</title>" # real name
curl -s https://bwcontainers.com/ | grep -ci abn # >0
# and: every product page shows a price
```

Report back the actual output of each line above. “Done” = all five checks pass on <https://bwcontainers.com> and every product shows a price — verified on the live URL, never on API responses.

Generated by the GMC Audit Bot skill. Internal compliance guidance — not legal or tax advice; confirm ABN/GST handling with an Australian accountant. Merchant Center approval is discretionary.
