

Compliance Fix Checklist

Website: trenchesafety.org · Platform: WordPress + WooCommerce · Audit date: 2026-07-23

VERDICT: NOT SUBMIT-READY — a rebuild, not a polish.

This site is a half-built store on an unfinished theme demo. As-is, Google Merchant Center would suspend it on sight for misrepresentation. Work every box below to green, then submit once. Approval is never guaranteed (propane/heavy equipment gets manual review).

HOW TO USE THIS CHECKLIST

- Hand this to a Claude Code session that has your WordPress login / Application Password. Tell it: “Fix every item in this checklist, in order.”
- **Never let it invent business facts.** If a real value (address, phone, email, price, business name) is missing, it must stop and ask you — a fake value is the exact thing that gets stores banned.
- Complete Section 1 (what you provide) first; the agent cannot finish without it.
- Tick each box as it is done. Only submit to Merchant Center after the Final QA sweep is all-green.

1 · WHAT YOU MUST PROVIDE FIRST (the agent cannot invent these)

- ☐ WordPress access — admin login or Application Password, + WooCommerce REST API keys (Read/Write). Back up the site first.
- ☐ One business identity — the real business name to use everywhere. Decide whether “TrenchSafety” stays the brand even though you sell containers/propane/trailers (if so, the site must clearly explain the brand + what it sells).
- ☐ Real contact info — a business email on your own domain (not info@gmail.com), one real phone, one real street address (not a Plus Code), business hours.
- ☐ A real price for every product — the propane-tank pages currently have NO price. Nothing can go live without this.
- ☐ Propane eligibility + shipping — confirm you can sell/ship pressurized propane tanks and how (freight/LTL, lead times).
- ☐ Payment processor legal name + checkout/bank descriptor (should read “TRENCHSAFETY”).

2 · ERRORS & FIXES (grouped by severity)

P0 — CRITICAL (each is an instant suspension)

- ☐ **[P0] Unfinished theme-demo content on every page — insurance placeholder copy, “Yellow Construction Company”, a Bangladesh demo phone (+880 155-69566), a Fall River MA demo address, info@gmail.com and support.industrie@gmail.com.**

Fix → Replace the global header/footer (Elementor Theme Builder / Customizer) with the real business name, address, phone, email. Remove every demo string site-wide.

☐ **[P0] Domain doesn't match the business — "trenchsafety.org" sells propane tanks, containers and trailers.**

Fix → Align the domain/brand with what's sold, or make the site clearly explain the brand and its products. Name and goods must tell one story.

☐ **[P0] Contradictory identities — a construction firm (roofing, demolition, civil engineering, a "Team" page) AND an equipment reseller on the same site.**

Fix → Pick one business model. Delete the construction-services / team / pricing-plan demo sections.

☐ **[P0] No genuine, consistent contact info — info@gmail.com + a Bangladesh phone are fake; 5 different emails; two addresses incl. a Google Plus Code that isn't a street address.**

Fix → One real email (own domain), one real phone, one real street address — identical on the site, policies, Merchant Center and payment processor.

☐ **[P0] Products have no price — e.g. the 500-gallon ASME propane tank shows add-to-cart but no price.**

Fix → Set a real price on every product; feed price = landing-page price = checkout price.

P1 — HIGH

☐ **[P1] "Coming soon" plugin active + a public /coming-soon page (under-construction signal).**

Fix → Deactivate the Ultimate Coming Soon plugin; confirm no page serves an under-construction wall.

☐ **[P1] Restricted / dangerous-goods category — propane tanks are pressurized fuel vessels; heavy equipment draws fraud scrutiny.**

Fix → Confirm eligibility to advertise, disclose shipping/handling honestly, expect manual review.

☐ **[P1] Policy pages sit inside the demo shell — returns/shipping/terms/etc. exist but render under placeholder header/footer.**

Fix → Read each; make it real, specific, original and consistent with product pages (freight costs, return window/fees in real days, governing-law state).

P2 — MEDIUM

☐ **[P2] Dozens of theme demo pages are public ("Icon Box Elements", "Pricing Elements", service pages, etc.) — thin, irrelevant, duplicate content.**

Fix → Delete all demo "Elements" / Services / Team / Pricing pages; rebuild the menu with real pages only.

☐ **[P2] Shared operator with a second store (BeepWear) — cross-account association risk.**

Fix → Keep each store independently compliant; a suspension on one can taint the other.

3 · STEP-BY-STEP FIX PROCEDURE (do in order)

Phase 1 — Purge all theme-demo content

- ☐ Replace global header/footer with real business name, address, phone, email.
- ☐ Set Site Title, Tagline, Admin email (Settings → General) and WooCommerce store address.
- ☐ Point Contact Form 7 + WooCommerce emails to the real business email.
- ☐ Remove every demo string: insurance copy, “Yellow Construction”, +880 phone, Fall River MA, info@gmail.com, support.industrie@gmail.com.

Phase 2 — Delete demo pages & rebuild the menu

- ☐ Trash all demo pages: the “...Elements” pages, all /services/* pages, Projects, Team, Pricing Plans, Appointment, About-us duplicate, Contact-2, Coming-soon.
- ☐ Rebuild the main menu to real pages only: Home · Shop · Containers · Dump Trailers · Propane Tanks · Utility Trailers · About · Buyers Guide · Blog · Contact.
- ☐ Keep policies in the footer menu.

Phase 3 — Disable “coming soon”

- ☐ Deactivate the Ultimate Coming Soon plugin; verify no under-construction wall for any visitor.

Phase 4 — Rewrite About + homepage identity

- ☐ Rewrite /about with the real story — no demo, no invented people.
- ☐ Make the homepage describe one coherent business that matches the domain/brand.

Phase 5 — Price & complete every product (WooCommerce REST API)

- ☐ Set the real price on every product (start with propane tanks, containers, trailers).
- ☐ Set condition (new/used), brand and GTIN where they genuinely exist (else identifier-exists = no).
- ☐ Set weight / freight class so shipping is real at checkout.
- ☐ Product images = the real item, ≥ 500×500 px, no overlays. Confirm each page is purchasable.

Phase 6 — Verify & fix the policy pages

- ☐ Make shipping, refund/returns, product-condition, sales-tax, payment, terms and privacy real, specific, original and consistent; remove demo text; show the real business name/contact.

Phase 7 — Final QA sweep (must pass before Merchant Center)

- ☐ Confirm no demo strings remain anywhere (see Section 4).
- ☐ Every product has a price; contact info identical everywhere; HTTPS on every page incl. checkout; sitemap regenerated; menu = real pages only.
- ☐ Then connect Google for WooCommerce on verified trenchfsafety.org, match business info to the site + payment processor, and request review ONCE.

4 · FINAL QA SWEEP — leftover-demo string check

Run this after the fixes. It greps the live pages for demo leftovers — a clean site returns NO output:

```
for url in / /about /contact /shop /refund_returns /shipping-policy /terms-and-condition; do
  curl -s "https://trenchsafety.org$url" | grep -Eio \
    "insurance needs|yellow construction|\+880|fall river|william s canning|vvv4\+3g7|\
    info@gmail\.com|support\.industrie|industrie|lorem|coming soon|joshua sendu" \
    | sort -u | sed "s|^|$url: |"
done # expect: no output = clean
```

Generated by the GMC Audit Bot skill. This is an internal compliance checklist — not legal advice or any guarantee of Google Merchant Center approval. Google's review is discretionary and conservative for heavy-equipment / dangerous-goods categories.
