

Apply Edits to the LIVE Site — and Prove They Saved

Instructions for Codex (AI coding agent) · WordPress + WooCommerce + Elementor · 2026-07-24

WHY YOU ARE GETTING THIS. A previous edit attempt did not reach the live site — trenchesafety.org still shows all the demo content and the products still have no prices. That usually means edits were made to local files or a staging copy, or the global header/footer template was never touched. This document's #1 job: make the changes on the real live WordPress at <https://trenchsafety.org> and verify each one from the public URL.

0 · NON-NEGOTIABLE RULES

- You are editing the LIVE production WordPress at <https://trenchsafety.org> — not a local repo, not a template file, not a staging clone. If you cannot reach that live site's WordPress, STOP and tell the owner.
- **Never invent business facts.** No fake phone, address, email, price, name, or GTIN. (The site already has stray fakes like "(684) 555-0102" — do not add more.) If a real value is missing from Section 2, STOP and ask.
- Verify every change from the public URL, not from an API "200 OK". A change only counts when `curl https://trenchsafety.org/...` shows it.
- Back up first (DB + files).

1 · PREFLIGHT — prove you can read AND write the LIVE site

Do this BEFORE any real edit. It proves your changes actually reach production.

1a. Prove you see the live site (should print a number > 0):

```
curl -s https://trenchsafety.org/ | grep -c "insurance needs"
```

1b. Prove you can write to it and it goes public. Write a temporary marker, purge cache, fetch the public URL, confirm it appears, then remove it:

```
# via WP-CLI (preferred):
wp option update blogdescription 'LIVEWRITE-OK-9137'
wp cache flush
curl -s https://trenchsafety.org/ | grep -o 'LIVEWRITE-OK-9137' # must print the marker
# revert:
wp option update blogdescription '<real tagline>'
```

If 1b does not print the marker, your edits are NOT reaching the live site — likely: (a) you're editing local files, not the live DB; (b) you're on staging; (c) a cache/CDN is serving old pages; or (d) you lack write access. Fix this FIRST — nothing else matters until 1b passes.

2 · REAL FACTS YOU NEED FROM THE OWNER (do not invent)

- Real business name/identity to show everywhere.
- Real email (own domain, not info@gmail.com), real phone, real street address, hours.
- A real price for every product.
- Payment-processor legal name + checkout descriptor ("TRENCHSAFETY").

3 · MAKE THE EDITS — each followed by a LIVE verify

3a — Purge demo content from every page (header/footer live in the Elementor template + DB)

```
wp search-replace 'info@gmail.com' 'sales@trenchsafety.org' --all-tables
wp search-replace '(+880)155-69566' '<REAL_PHONE>' --all-tables
wp search-replace '(684) 555-0102' '<REAL_PHONE>' --all-tables
wp search-replace '374 William S Canning Blvd, Fall River MA Road 2721, USA' '<REAL_ADDRESS>' --all-tables
wp search-replace 'VVV4+3G7, Watertown, SD 57201, USA' '<REAL_ADDRESS>' --all-tables
wp search-replace 'Yellow Construction Company' '<REAL_NAME>' --all-tables
# the insurance tagline lives in the Elementor header/footer template:
# Elementor → Templates → Theme Builder → Header/Footer → edit → remove it → Update
wp cache flush ; wp elementor flush-css 2>/dev/null || true
```

VERIFY (must print nothing):

```
for u in / /about /contact /shop /refund_returns /shipping-policy /terms-and-condition; do
  curl -s "https://trenchsafety.org$u" | grep -Eio "insurance needs|yellow construction|\\+880|\\(684) 555-0102|fall river|william s canning|vvv4\\+3g7|info@gmail\\.com" ; done
```

3b — Delete demo pages + rebuild menu; disable coming-soon

```
wp post list --post_type=page --fields=ID,post_title --format=table # find demo pages
wp post delete <ID> --force # ...Elements, /services/*, Team, Projects, Pricing, About/Contact dupes, Coming-soon
wp plugin deactivate ultimate-coming-soon
# VERIFY: curl -s https://trenchsafety.org/ | grep -io 'coming soon' → nothing
```

3c — Price every product (WooCommerce REST) + set condition/brand

```
GET /wp-json/wc/v3/products?per_page=100&page=N
PUT /wp-json/wc/v3/products/<id> { "regular_price":"<REAL>", "status":"publish",
  "weight":"<lbs>", "shipping_class":"freight", "meta_data":[{"key":"condition", "value":"new|used"}] }
# VERIFY each: curl -s https://trenchsafety.org/product/<slug>/ | grep -o '\\$[0-9,]\\+' → shows the price
```

Assert count of products with an empty price = 0 before finishing.

3d — Real contact + one identity on About/homepage/policies

```
# WP REST page edit example:
curl -u USER:APP_PASSWORD -X POST https://trenchsafety.org/wp-json/wp/v2/pages/<id> \
  -H 'Content-Type: application/json' -d '{"content":"<real html>"}'
# VERIFY: curl -s https://trenchsafety.org/contact/ | grep -o 'sales@trenchsafety.org' → present
# and no info@gmail.com / fake numbers remain
```

4 · PURGE CACHES (so the public site shows the changes)

```
wp cache flush
# LiteSpeed/Hostinger: wp litespeed-purge all (or Hostinger hPanel → Cache → Purge)
# If Cloudflare is in front: purge the Cloudflare cache too.
```

5 · FINAL PROOF — run against the PUBLIC URL; all must pass

```
# A) demo-string sweep — expect NO output:
for u in / /about /contact /shop /refund_returns /shipping-policy /terms-and-condition /privacy-policy-2
; do
  curl -s "https://trenchsafety.org$u" | grep -Eio "insurance needs|yellow construction|\\+880|\\
(684) 555-0102|fall river|william s canning|vvv4\\+3g7|info@gmail\\.com|support\\.industrie|coming soon" \\
  | sort -u | sed "s|^|$: |" ; done
# B) every product priced — expect 0 unpriced
# C) contact info identical on site + Merchant Center + payment processor
```

6 · REPORT BACK TO THE OWNER

Paste the actual output of the Section 5(A) sweep and the unpriced-count from 5(B). “Done” is only true when 5(A) prints nothing and 5(B) is zero — both run against <https://trenchsafety.org>. Do not report success on API responses alone.

Generated by the GMC Audit Bot skill. Internal compliance guidance — not legal advice or a guarantee of Merchant Center approval; propane / heavy-equipment gets manual review.
